Data Access

Data Access Patient critical data is stored in MEDITECH Live, data repositories, and various databases. Access to this data may require many different methods, systems, and protocols to get a holistic view of the patient data. IPeople can provide a single point-of-entry to all of your data sources, minimizing waste and frustration.

IPeople Connect

IPeople understands the importance of having direct, real-time access to your healthcare data. Our IPeople Connect solution provides your organization with bi-directional, open integration with your HCIS system and most standard database systems. IPeople Connect allows you to:

- Access HCIS data real-time using industry standard solutions
- Make your HCIS data available to other applications
- Upload data into your systems via scripting
- Explore and access all of your data within your HCIS system and disparate systems

SOLUTIONS TO FIT YOUR DATA ACCESS NEEDS

IPeople Direct

IPeople Direct is an industry leader when it comes to accessing your data... access information real-time and in the way that you want to see it. IPeople Direct delivers a single point of connectivity to access all connected systems through ODBC, OLE DB, or ADO.NET for quick and simple, real-time reporting. With simplified access to information and intuitive tools for exploring your data, our customers see immediate return on their investment with increased database knowledge and time savings.

IPeople Script

IPeople Script's intuitive wizards allow you to automate the script-writing process and eliminate the manual typing of data into your HCIS system. Both technical and non-technical users will find benefit from IPeople Script's approach and flexible script-building features such as drill-down capabilities, auto-recovery, and alert notifications. In addition, IPeople Script includes the ability to perform real-time queries against your HCIS system and other data sources, and supports the simultaneous running of scripts for supported platforms.

IPeople Echo

Create a customized data repository with IPeople Echo, a web-based data download manager and repository builder inspired and evolved over the years by the needs of our users. IPeople Echo makes it easy for you to capture and store data useful for historical reporting that would otherwise be lost due to data purging; download data for trending analysis; and store data for disaster recovery preparedness. Create, schedule, and monitor custom downloads to Microsoft SQL Server without having to write a line of code!

IPeople Scout

Bridge the gap between you and your data! Searching for your data when it is in disparate systems can be very task oriented, timely and very frustrating. IPeople Scout offers a wide range of tools that make it easier to find and organize your data. With IPeople Scout, explore your data to identify table relationships, intelligent joins across tables and systems, and visualize database crosswalks. Additionally, IPeople Scout offers powerful comparison, preview, and export features.

Data Access

HEAR IT FROM THE CUSTOMERS

"IPeople is great. We are the most popular group in the organization because we have the right tool with IPeople Echo. People don't always trust the data they receive from the MT DR, but IPeople Echo is trusted and we have access to tables that they (other depts.) don't have access to. It's a great tool."
-Jay O'Donnell, Island Health

"IPeople Direct is a great product! One of our main benefits is the integration with SQL Server Integration Services. Using IPeople Direct's OLE DB driver, we can download many different sets of data simultaneously across our system at all times throughout the day. We usually average 100+ queries running at any given time during the day. Also, the support staff is great to help us with complex queries. It really is a great product."
-Brandon Tolleson, Arkansas Children's

"People Scout has dramatically reduced the time and effort spent to create reports and mine data. The added functionality of smart joins across multiple Meditech tables has been a life saver. I no longer have to dig through documentation, or use trial and error to ensure I have the correct linked fields for multiple tables. The different type of export formats has also saved time. I am now able to export via excel, pdf, txt, or csv without having to go through the hassle of bringing multiple file types across multiple programs. The ease of use has also translated into being able to train additional users to write simple reports without having to burden the IS department. IPeople Scout has helped our facilities leverage Meditech data in a quicker more user-friendly manner."
-Drew Johnson, Formerly with Clearwater Valley Hospital

IPeople Connect, complimented by a variety of innovative services:

IPeople Select DR
Don't have time to build your own data repository? Need gaps filled with your existing DR? Take advantage of pre-packaged data repository downloads that will set you on the right path. Have confidence knowing your data repository was built using best practices, tuned to be as efficient as possible, and with full auditing in place.

Custom Script Development
Need specific data entry into MEDITECH or other systems, NOW? IPeople provides an immediate and experienced resource to help with your custom scripting needs. Our solutions are tailor-made to meet your needs.

Report Writing Services
Is your IT department seeing a rise in the demand of detailed reporting across multiple platforms? IPeople offers report writing services using NPR Reports, Report Writer (M-AT), and SQL. Our in-depth HCIS data knowledge ensures we get the job done quicker and carry you beyond the limitations of existing report writing solutions. By adding theses services you will see a savings in your resources used.
