

## The Life and Grind as a Nurse

85% of nurses state they are struggling with continually flawed EHR systems. <sup>[1]</sup>

98% of nurses are dissatisfied with the time allowed to be spent with patients versus the time allowed to document... <sup>[1]</sup>

90% of EHR nursing users attested that the use of the current EHR system in their facility has negatively impacted communications between nurses and their patients. <sup>[1]</sup>

For many nurses, remembering how paper charting was done is becoming a distant memory. Someday we may completely lose the art of squinting our eyes just so, and tilting our heads at just the right angle to read the written documentation from the previous shift. Computerized charting has eliminated the illegible documentation we once had to endure.

Computerized charting, however, hasn't eliminated misspellings. Documentation is the legal record and spelling errors can become distracting and give the appearance of our documentation as being unprofessional and unreliable. Although correct spelling and patient care may not be linked, many spelling errors may reflect negatively on our ability to accurately and reliably deliver care.

Ipeople can help minimize errors in charting by giving users the ability to have a spell check feature when documenting free-text fields. It may be impossible to eliminate all errors in charting, however, utilizing spell checking can help produce a more professional and trustworthy legal patient record.

But don't stop there... Ipeople offers innovative solutions to help fill the gaps in workflow automation, data validation, and even missing features from your current healthcare applications. Do you have ideas on how you wish your current software would work but are not sure how to implement these ideas? Click [here](#) to learn more about how Ipeople can help!

We Get Your Data

2274 Rockbrook Dr. Lewisville, TX 75067 – 214-222-1125 – Customer Support: 469-645-2768 – Fax: 214-292-9783

## Let IPeople Help

At IPeople, we help you automate your Nursing workflow so that you can give your patients what they need most... your time! Our goal is to create standardization and accountability through:

- Sustained improved error rate
- Decreased patient harm
- Improved patient satisfaction
- Higher staff satisfaction

### Sample Bi-directional Integration:

- Interventions
- Assessments
- Clinical Notes
- Vital Signs
- Notes
- Plan of Care
- Intakes and Outputs

### Sample Workflow Automation:

- Easily check spelling and grammar for assessments and intervention documentation
- Quickly launch a second session of your assessment screen
- Allow nurses to quickly access the patient's order history without leaving their documentation. Imagine, having the ability to access multiple types of information with no more jumping from routine to routine.
- Launch other 3rd party systems and pass patient identifiers based on the currently accessed patient
